Working as web developer, windows application developer, designer

SKILLS

During my professional career it was always important to have a good understanding for the needs of my customers, no matter if real customers or product owners of the company I worked for. Therefore I developed an interest in all fields surrounding software development. This helps in designing user interfaces as well as complete flows for use cases.

My experience with start-ups as well as with big tech companies gives me a broad understanding of requirements of different customer groups.

During the years I supported my clients to get projects back on track as well as building a product from zero to launch with continued development after launch.

ABOUT ME

Passionate about mobile developing for iOS and Android platforms. Interested in anything that can be programmed. If I am not coding I enjoy motor sports, watching and driving Go-Karts myself. And if not doing that I spend my time with friends & family biking, skating or just watching a movie. Hopefully science-fiction.
